FEATURES OF COOLING SYSTEM AND COMPONENTS:

• No. 2 high thermal exchange coefficient multi-circuit evaporators with cataphoresis anti-corrosion treatment, equipped with air deflectors to ensure high performance.
• The evaporator unit is equipped with 3 fans Ø230, each ensuring uniform cooling of the product on the trolley.
• The evaporator defrosting is electric to improve defrost quality and reduce defrosting time. The automatic defrosting is not activated during the cycle but only during the storage phase to avoid compromising the product inside.
• Accessible evaporator casing to facilitate cleaning and maintenance of the evaporator/fan area.
• Fan lock when the door is opened.
• Open-type condensing unit with high reliability, equipped with hermetic/scroll compressor.
• The electrical panel on the condensing unit allows constant monitoring.
• High and low pressure alarms, compressor oil overheating, and motor thermal protection are displayed both on the equipment's electronic control board and the unit's indicator panel.
• High-performance condenser sized to operate at an ambient temperature of 40°C (climate class 5).
• Condenser fan speed is variable and self-regulating.
• No. 2 High-efficiency steam boilers 3000W with openable structure for easy maintenance. 3/4" water connection, steam production from 2 to 2.6 kg/h.

<u>CONTROL PANEL</u>

• Programming and managing the proofing cycle is extremely easy and precise thanks to the 7" multifunction touch electronic control board. Intuitive and user-friendly, it allows you to set the phases of cooling, storage, warming, proofing, and holding, with the option to store up to 100 work programs and select from 7 languages.

The electronic board ensures an ideal climate for any type of product by controlling temperature and relative humidity. It also provides immediate diagnostics through constant monitoring and display of operating parameters.
